# Contents

<b>1</b>	<b>Introduction to Ordinary Differential Equations</b>	<b>2</b>
1.1	Basic Terminology . . . . .	2
1.1.1	Ordinary vs. Partial Differential Equations . . . . .	2
1.1.2	Independent Variables, Dependent Variables, and Parameters . .	3
1.1.3	Order of a Differential Equation . . . . .	3
1.1.4	What is a solution . . . . .	3
1.2	Systems of Differential Equations . . . . .	4
1.3	Families of Solutions, Initial-Value Problems . . . . .	5
<b>2</b>	<b>First-Order Differential Equations</b>	<b>6</b>
2.1	Separable First-Order Equations . . . . .	6
2.2	. . . . .	9
2.3	. . . . .	9
2.4	Existence and Uniqueness of Initial Value Problems . . . . .	9
2.5	Exact Ordinary Differential Equations . . . . .	9
2.5.1	Substitution . . . . .	11
2.5.2	Bernoulli Ordinary Differential Equations . . . . .	12
2.6	. . . . .	14
2.7	Phase Lines and Equilibrium Solutions . . . . .	14
2.7.1	Bifurcations . . . . .	16
<b>3</b>	<b>Second-order Differential Equations</b>	<b>17</b>
3.1	General Theory of Homogeneous Linear Equations . . . . .	17
3.2	Homogeneous Linear Equations with Constant Coefficients . . . . .	18
3.2.1	Second-order Equation with Constant Coefficients . . . . .	18
3.2.2	Equations of Order Greater Than Two . . . . .	18
